

## PROJECT MANAGEMENT METHODOLOGY CONSULTING AND TRAINING

### CLIENT

Williams Gold Mine

### LOCATION

Northwest Ontario,  
Canada

### PROBLEM

To develop easy to use  
Project Management  
Process for  
maintenance  
department.

### SOLUTION

Developed a Project  
Management Process  
Model and Process  
Guide.

The Hemlo operations consist of the Williams and David Bell mines, located in northwestern Ontario near the town of Marathon. The mines are jointly owned and operated by Teck Cominco and Barrick Gold Corporation. David Bell is an underground mine developed through a 1,160 metre production shaft. The mill is decommissioned and all ore from the David Bell mine is transported to the nearby Williams mill for processing. Williams has both underground operations and open pit mining. The underground mine is accessed by a 1,300 metre production shaft. The open pit lies immediately above and adjacent to the underground mine. Ore from these two sources and the David Bell mine are treated in the Williams mill.

Procept was hired by Williams Gold Mine to develop a Project Management Methodology and provide supporting training.

Our approach for this project was:

- Initial conversations with Project Managers and review of the present project management processes and documents
- Development of a Project Management Methodology consisting of:
  - Process Map
  - Guidelines for use
  - Improvements to existing templates and forms
  - Linking all three for easy computer access
- Training maintenance staff in use of the methodology.
